

*“A dynamic approach. Experience. Coherence. Commitment. And a strong belief in our ability to achieve the best results for our customers, people in general, the environment and most of all ourselves. All this led us to create TÉRREO, a company engaged in the engineering and construction business”.*

**TÉRREO S.A.** is a company that provides engineering solutions to satisfy different construction market needs, such as civil, urban development and road and railway works, including linear work projects, design and layout calculations for highways, railway tracks, bridges, infrastructure works, sewerage systems and buildings.

An outstanding professional team assists our partners in their commitment to offer the **best possible results** and quality warranted works through an optimal use of human, material and financial resources, at all times in pursuit of the best cost-benefit alternative for each customer.

We have been active in this market for over **20 years**, and have provided engineering services for salient works, including regular assistance through the provision of topographic and engineering services and of precision tools to perform surveys and structural redesign works, earthwork calculations and follow-up, railway track restoration, construction of vehicle crossings, railway and road bridges, sewerage systems, canals and embankments, bathymetry surveys and Real Estate technical consulting services.

#### Our design activities

- Railway works
- Road works
- Civil works
- Water works
- Housing projects

#### Our construction activities

- Housing buildings
- Civil works
- Railway works
- Water works
- Road works

#### Other specialized services

- Topographic services
- Legal surveying services

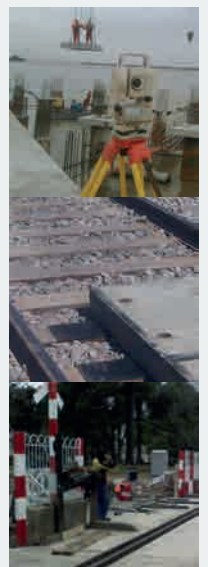

*With our experienced professional team and state-of-the-art specialized software, we are able to offer our customers top-quality products within the time required by their individual needs.*

*We are leaders in railway engineering development in Argentina. We have over 20 years' experience in the implementation of railway and underground railway projects.*

*We have designed railway bridges, stations, line layouts, wayside equipment and vehicle crossings.*

- Economic feasibility studies and design of new layouts.
- Surveys and executive projects for railway renewal and improvement.
- Geometric layout calculation pursuant to technical standards, with the use of specialized software.
- Vehicle traffic lane projects and design of civil works.
- Water sanitation and drainage projects for railway works.
- Executive projects for railway bridges.
- Detail engineering.
- Structural design for the adaptation of civil engineering works.
- Executive projects for the elevation of railway platforms and the improvement of stations.
- Project and design of signal circuits and cabins.
- Design and layout of underground tunnels.
- Railway topographic surveys / redesign.
- Contour topographic surveys.
- Generation of Digital Terrain Models (DTM).
- Longitudinal and cross profiles.
- Metric calculation.
- Earthworks calculation.

*There are no large or small projects. They are simply projects, and each of them demands from us accuracy, commitment and our utmost dedication. With no exception.*

**TÉRREO S.A. performs road engineering works for leading companies in the Argentine market that are suppliers to the Argentine Road Authority (AYSA S.A).**

*Our services include the design of water networks and sewerage systems for concession areas and gated communities, and storm draining systems for paving projects. Also, the calculations required for protection works in bridges over large, fast-flowing rivers, and hydrological and hydraulic studies for the determination of work dimensions.*

### **Water works**

- Sewerage and water networks survey and projects:
  - Design of structural works, main pipelines and lift stations.
  - Design of secondary networks.
  - Drinking water networks.
- Storm drains project in gated communities.
- Hydrological studies and water works project in:
  - Railway works
  - Road works
- Drainage project for housing buildings.

*We have over 20 years' experience in the execution of projects involving railways and underground railways, railway bridges, paving works, roads, water networks, sewerage and earthworks.*

**TÉRREO S.A. performs road engineering works for leading companies in the Argentine market that are suppliers to the Argentine Road Authority.**

*Our services are provided by experienced highway engineers, through the use of state-of-the-art topographic surveying equipment and specific work design and calculation software.*

- Road topographic surveys.
- Roadwork executive projects: expressways, highways, city streets.
- Design of road layouts, curves, camber, intersections.
- Water works and storm drains calculation.
- Structural calculation, earthworks, geometric calculation.
- Determination of traffic density.
- Projects for municipal paving works, industrial plants and gated communities.
- Design of road bridges.
